Subject: GenX questions
Attachments: signature.asc

Dear Robert and Cathy-

You were the two people who used to help me with pieces about PFAS, so I am writing to you now with questions I have for a story about GenX, one of the replacements for PFOA. As you probably know, GenX has been found in the drinking water in North Carolina. It has also been found in ground water in Ohio near the Parkersburg, WV Chemours plant. I'll explain both in a piece I am now writing. I am writing to ask whether EPA is planning on setting a drinking water standard for GenX and if you have any other comments on the presence of GenX in drinking water.

I am filing this story this afternoon so need to hear from you by 1 pm today.

Thank you,
Sharon
